

PROTECT YOUR BUSINESS EFFORTLESSLY

Corporate cyber protection –
easy to deploy and manage

Encryption ransomware attacks, targeted hacks, and internal threats have long since ceased being a problem just for large companies.

Small and medium-sized businesses are increasingly becoming targets for hacker attacks, and most do not have their own information security team.

Dr.Web Enterprise Security Suite (ESS) – comprehensive protection for a company's IT infrastructure: from workstations and servers to email, Internet traffic and mobile devices.

All protection components are managed centrally from a single console.

Key benefits

Real-time protection from brand-new threats

Prevents ransomware attacks and complex malicious programs due to its behavioural analysis mechanisms and proactive protection, even before threats appear in the virus databases.

Easy centralized management

A single console lets you centrally manage an antivirus protection system without undertaking complex configurations and without having to expand your IT team.

Reduced administration costs

The automation of routine operations reduces the workload for information security specialists and decreases the total cost of ownership.

Easy integration into an existing infrastructure

Compatible with major operating systems and quickly adapts to the current IT environment.

How it works

Comprehensive protection includes:

Dr.Web Server Security Suite:
servers

Dr.Web Mobile Security Suite:
mobile devices

Dr.Web Desktop Security Suite:
workstations and virtual environments

Dr.Web Gateway Security Suite:
Internet gateways

Dr.Web Mail Security Suite:
mail traffic

All components work as an integrated system and are centrally managed.

Who is this solution for?

It is suitable for:

Small and medium-sized businesses

Companies with a distributed structure and remote employees

Organizations lacking a dedicated information security team
